

All animal species are welcome.

But as we are not experts in all animals, we need help!

If you want to add a species, we need someone with extensive knowledge of that species to contact us directly by email. **animaldatabase.dk@hotmail.com**

You can, so far, write to us in Danish, Swedish, Norwegian, German and English.

In order for us to create a new species we need the following information:

Species, for example Hedgehog, and **subspecies** [here the Latin names are used]

Example:

1. Hedgehog subspecies Atelerix Albiventris and Hemiechinus Auritus.
2. Tenrec subspecies Echinops Telfairi - Lesser Tenrec and Seitifer Setosus - Greater Hedgehog Tenrec and Tenrec Ecaudatus - Common Tenrec.

Colours/pattern/markings:

Here will be the possibility to make the combinations within the different species.

(See how by going into create animals - for example under create Hedgehog)

Under colours there are several fields describing just colours and pattern.

It may also be other things like fur type that can be put in there.

For animals that are ringed, tattooed, have a chip or other ID, there is a field where you can enter the number.

The field will appear after the animal is created.

In that way the animal gets its own ID here in the database in relation to the pedigree and at the same time its own official ID is displayed on the animal's own page.

It will be possible to use the search function to find both.

The animal's second ID will appear when downloading and printing the pedigree in PDF format.

If you have any questions please feel free to write to us.
